

Hackathon challenge: Design an app-based system to track data on electrical waste

There's a big problem with recycling electrical goods. There is a disconnect between information about manufacturers, retailers and consumers and information captured at the point of recycling collection. Cracking this would dramatically improve understanding of product usage and longevity, accuracy of information about recycling and evidence to support its merits.

Think you can help crack it? Come to the Bath Climathon!

The Bath Climathon is a two-day event to co-design a system that tracks electrical products from the point of manufacturing, through retail and consumption to recycling and reuse.

**Join us for the Bath Climathon
24–25 October 2019 at the Roman Baths, Bath**
It's free, and we'll provide refreshments
